

Enhanced Xenon 1902h

Wireless Area-Imaging Healthcare Scanner

Honeywell's Xenon healthcare scanner has long been the choice for best-in-class healthcare organizations looking to improve their medication administration and positive patient identification workflows. Now, the next-generation Enhanced Xenon 1902h adds a number of features specifically requested by clinicians to further enhance patient comfort and improve common clinician workflows.

Setting the high watermark for scanning performance, the Enhanced Xenon 1902h utilizes Honeywell's sixth-generation Adaptus™ area-imaging technology for incredibly responsive reading of virtually all 1D, PDF, and 2D bar codes—even challenging high-density, low contrast, translucent or damaged codes. ColorFusion™ technology adds color imaging, allowing the scanner to read color bar codes that are becoming more prevalent in healthcare environments.

To enhance patient comfort while maintaining clinician productivity, the Enhanced Xenon 1902h can be quickly toggled into Patient Do-Not-Disturb mode. When in this mode, audible feedback is disabled and replaced by additional visual display options that provide positive status indication to the clinician. Additionally, a unique Scan Lamp mode can be activated with the touch of a button. When mounted above a workstation on wheels (WoW) display, the Scan Lamp casts white illumination to the work surface. This allows staff to read labels, verify medication, or enter data—all without having to turn on the room light and disturb resting patients.

The Enhanced Xenon 1902h is enclosed in a disinfectant-ready housing which resists the harmful effects of harsh cleaning agents commonly used in healthcare environments and minimizes the spread of infectious diseases. Backed by a three-year warranty, the Enhanced Xenon 1902h scanner is built to deliver years of uninterrupted performance in challenging healthcare environments.
